

Parrot UNIKA for JAGUAR X-TYPE

Parrot UNIKA is a universal interface that allows you to control the Parrot MKI9200 directly with the OEM steering wheel commands. Parrot UNIKA can work with car protocols such as CAN, KBUS or resistive systems.

Before installing the UNIKA, make sure you have the latest software update on your Parrot MKI9200.

If you have a Parrot MKi9100, make sure you also have the 3.1 display version. To do so, select **Settings > Advanced settings > Information**.

Installation

Parrot reference For Parrot MKI9200
Parrot UNIKA: **PI090020AB**

Installation of the Parrot MKi We recommend you to install the Parrot MKi before installing the UNIKA. Make sure the installation is correctly performed by checking if the «Good bye» message is displayed when you turn off the ignition.
► *Refer to the documentation of your Parrot MKi for more information.*

Selecting the protocol Use the DIP switches located on one side of the UNIKA to select the protocol (resistive or CAN Bus / KBus) on which the vehicle is based.

Warning: *Make sure the UNIKA is not powered before selecting the protocol.*

Set the DIP this way if you have an OEM radio.

Set the DIP this way if you don't have an OEM radio.

Power supply The power supply for the UNIKA interface is taken from the power cable of the Parrot MKi. It is important to follow the color code of the power cable wires: the red wire of the kit's cable corresponds to the permanent 12V supply; the orange wire corresponds to the ignition 12V ; the black wire is for ground ; the yellow wire corresponds to the Parrot mute output.

Warning : *Connect the ignition to the Parrot car kit if the vehicle is based on a resistive or a K-Bus protocol. Don't connect the ignition if the vehicle is based on a CAN protocol.*

On some vehicles, the 12V power wires may be reversed, in which case you must reverse the red and orange wires of the hands-free kit's power supply. This can easily be done by reversing the two fuse holders on the kit's power cable.

12V ignition is not provided.
Get the 12 V ignition from the car.

Resistive protocol

The wires corresponding to the resistive protocol must be connected correctly to your car stereo's. It is important to follow the wiring diagram for your vehicle.

Checking the wiring Once your UNIKA interface has been fitted, the LED should light up green and should turn amber while pressing a button on your steering wheel. If the LED does not light up, check the power supply connections. If the LED is red or blinks red, check the connections.

Warning : Once the installation is complete, turn the ignition off until the UNIKA LED switches off.

Reset procedure In case of problem or if you have installed the UNIKA interface in another car, reset the UNIKA by holding down the Reset button until the LED turns off (if the vehicle is based on a CAN Bus / KBus protocol) or blinks red (resistive protocol). You can then release the reset button.

Parrot MKi9200

RESIS Configuration JAGUAR

The wires corresponding to the RESIS protocol must be connected correctly to your car stereo's RESIS information. It is important to follow the wiring diagram for your vehicle. We would advise our customers to have the interface fitted by a professional.

If your car stereo supports mute signal management, then your actions on the steering wheel commands while using a Parrot MKI9200 will not be taken into account by the car stereo. To find out the mute position of your car stereo, refer to the documentation of your device or contact the car manufacturer.

1- Programming Parrot UNIKA for your car

The wires corresponding to the resistive protocol must be connected correctly to your car stereo's. It is important to follow the wiring diagram for your vehicle.

Defining the mode

If your vehicle is based on a resistive protocol, you have to define the mode manually:

1. Turn the ignition on.
 - > The LED blinks red once.
2. Press the buttons on the steering wheel in the following order:

> Each time you press a button, the LED blinks in red.

Reset procedure

In case of problem or if you have installed the UNIKA interface in another car, reset the UNIKA by holding down the Reset button until the LED turns off (if the vehicle is based on a CAN Bus / KBus protocol) or blinks red (resistive protocol). You can then release the reset button.

Specific case If you do not have 7 buttons on your steering wheel, hold down the last button for two seconds until the LED turns green.

Warning : *Once the installation is complete, turn the ignition off until the UNIKA LED switches off.*

Your system runs on C mode.

Resistive protocol

The wires corresponding to the resistive protocol must be connected correctly to your car stereo's. It is important to follow the wiring diagram for your vehicle.

Checking the wiring Once your UNIKA interface has been fitted, the LED should light up green and should turn amber while pressing a button on your steering wheel. If the LED does not light up, check the power supply connections. If the LED is red or blinks red, check the connections.

Warning : Once the installation is complete, turn the ignition off until the UNIKA LED switches off.

Reset procedure In case of problem or if you have installed the UNIKA interface in another car, reset the UNIKA by holding down the Reset button until the LED turns off (if the vehicle is based on a CAN Bus / KBus protocol) or blinks red (resistive protocol). You can then release the reset button.

2 - Features

Depending on the steering wheel control in your vehicle, the UNIKA interface will enable you to take full advantage of the telephone and music functions in 4 different modes: Mode A (4 buttons), Mode B (5 buttons), Mode C (6 buttons) and Mode D (7 buttons). The selection of this mode depends on the protocol of the vehicle.

Note : Pictograms on the buttons depend on the model of the vehicles.
